You've probably seen the Valero/Marathon/Flint Hills letter, but here it is just in case. Combined these refiners also make about 20% of the country's ethanol. They make some persuasive points in the letter. They say ideas proposed by the Department of Agriculture and the biofuels community "will not increase domestic ethanol usage, but will only give incentives for more imported biodiesel." They also argue that the challenges to ethanol are not related to SREs generally.

Also attached is a document that we put together using EIA data that shows there is no demand destruction from SREs.

Best,

Derrick
